(57) Claim

1. An electronic cash register comprising an electronic POS terminal and a plurality of external printers, said electronic POS terminal having a keyboard including a plurality of keys for entry of input information, a converter for converting the input information into print data, and a plurality of output ports for outputting the print data, said external printers being connected to said output ports and supplied with the print data from said output ports, wherein:

said external printers are of different models;
said converter converting the input information into different print data in accordance with different conversion programs preliminarily predetermined by identifiers preliminarily inputted to the POS terminal so as to be adapted to said external printers of the different models, respectively, said converter delivering the different print data to particular ones of the output ports preselected by the identifiers, respectively.
